

PRIDE PERENNIALS SCAVENGER HUNT

Florida was named for its abundance of flowers. To celebrate the colorful diversity that surrounds us, see if you can spot these Florida native and friendly plants around campus!

Seekers: flip the cards below to reveal the location hints. When you have found the flower, take a picture of it with a thumbs up.

Please do not pick these flowers.

Once you have found them, see the front desk of the library for your prize.

If you're stuck, scan the location QR codes or click the links in the online document:

Did you know:

Native plants are those that have long evolved and established themselves in their endemic environment. Encouraging native planting is necessary for a sustainable ecosystem.

Less resources are required to maintain native plants as they are adapted to local conditions, and thus less costly. They also support native wildlife by providing food and habitat—resources that invasive species can destroy.
